## Goats Goin' Great

Tuesday, 29 July 2008 14:51

Until five years ago Susan Miller had never been around goats. Now, she has a herd, each goat has a name and Miller says "a different personality." Miller, who runs her operation on a farm in Clark County, is the state's first licensed goat dairy and cheese plant operator. She obtained regulatory approval from the Kentucky Department of Agriculture last June.

Earlier this month she started hauling in goat milk from another herd in Bourbon County. It is in an effort to supplement the milk she gets from the ten milking goats on her own farm.

"I just can't milk any more goats and make cheese and live to tell about it," Miller said explaining the efforts to expand her pioneering goat cheese business. She sells three varieties of goat cheese at the farmers' market in Lexington. She sells about 70 pounds a week, the maximum she can produce with the milk she has. She says there's a need for more licensed goat dairies.
